

4463 26th Ave W. - Seattle, WA 98199 - (206) 283-7707

Is your current propeller the correct size?

The following test run is required and is the most accurate way to correctly prop your boat. Run the boat at wide open throttle with the normal weight load and provide us with the following information:

1. What is your current propeller size? (Size and stock number can be found on the propeller)
2. What is the maximum rated RPM range for your motor? (refer to your owners manual or contact your boat dealer)
3. What wide open throttle RPM can you achieve? (If the RPM continues over 200 beyond maximum back off)
